/note="Organ: circulatory system; Vector: pME18S-FL3;
Site 1: Xhoi, Site 2: Xhoi; The library was prepared from polyA+ RNA from unstimulated equine peripheral blood leukocytes isolated from a healthy adult horse.
Double-stranded cDNA was cloned unidirectionally into different brall sites of the pME18S-FL3 vector (5-prime Drall site is CACCATGTG, 3-prime Drall site is CACCATGTG; XhoI excises the cDNA insert."

            LeukoN2_1_G06.gl_A024 Unstimulated peripheral blood leukocytes N2 Equus caballus cDNA clone LeukoN2_1_G06_A024 5', mRNA sequence. CD466056.1 GI:31387324 EST.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Email: mmpratt@uga.edu
Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in
the Human Genome Center, University of Tokyo Institute of Medical
Science; tissue and RNA were prepared in the Department of Large
Animal Medicine, University of Georgia; sequencing done in the
Laboratory for Genomics and Bioinformatics, University of Georgia.
Sequence ends have been trimmed to exclude vector and regions below
Phred quality 16. Three-prime sequences are presented as their
reverse complement and have been trimmed to exclude polyA.
Seq primer: Sug5 (CTTCTGCTCTAAAAGCTGCG).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ArgValLysLeuThrLeuGluGlyLeuGluGluAspAspAspAspArgValSerProThr 177

GENERAL INFORMATION:

APPLICANT: Venter, J. Craig

APPLICANT: et al.

TITLE OF INVENTION: DETECTION KIT, SUCH AS NUCLEIC ACID

TITLE OF INVENTION: DETECTION EXPENSION OF 10,000 OR MORE

TITLE OF INVENTION: DROSOPHILA GENES.

TITLE OF INVENTION: DROSOPHILA GENES.

TITLE OF INVENTION: DROSOPHILA GENES.

CURRENT APPLICATION NUMBER: US/11/097,143

TITLE OF INVENTION: 9465, 23544, 7366, 27417, 57259, 21844, 943, 2061, 5891,
TITLE OF INVENTION: 9303, 9465, 13913, 13908, 14605, 16652, 1521, 6662, 13913, 12405 OR
TITLE OF INVENTION: 53003, 965, 56639, 9661, 16052, 1521, 6662, 13913, 12405 OR

Farlow, Deborah

APPLICANT:

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-270-767-11893/c

Sequence 11893, Application US/09270767

Factor No. 6703491

GENERAL INFORMATION:

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOTTWARE: PATENTIN Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3 ProSerGlnValAlaPheGluIleArg-----GlyThrLeuLeuProGlyGluValPhe 20
